NAGOMI CONTROL

The Execution Layer for Continuous Threat Exposure Management (CTEM)

EXPOSURE ISN'T A VISIBILITY PROBLEM. IT'S AN EXECUTION ONE, CREATED BY DISCONNECTED SYSTEMS.

Exposures rarely come from missing patches alone. More often, they stem from a combination of misconfigured, missing, or unenforced controls and vulnerabilities. Control gaps are the weaknesses attackers exploit before teams even see them.

Most organizations already have the right tools. What they lack is a continuous way to automate their inventory, measure how well defenses are performing, and determine what to fix first.

- **80% of breaches** stem from misconfigurations or missed controls, not tool gaps.
- Enterprises run **76+ security tools,** yet most don't validate protection.
- AI is helping attackers scale. Defenders are still stuck in **reactive mode**.

CONTROL THE EXPOSURE YOUR STACK OVERLOOKS FROM ONE PLATFORM

The Nagomi Control Platform, powered by Exposure Lens™, delivers the execution layer of CTEM, unifying **asset visibility, contextual prioritization, remediation guidance**, and **performance tracking** in one platform built to reduce exposure, not just map it.

Built for teams across security operations and leadership, Nagomi delivers automation and context that translates directly into action, without adding headcount or overhead.

WITH NAGOMI:

UNDERSTAND WHAT'S ACTIVELY DEFENDED

Aggregate data from 100+ tools into a live asset inventory, complete with control coverage, performance context and exposure data

PROVE AND IMPROVE YOUR DEFENSE

Translate progress into metrics that matter. Nagomi turns exposure data into defensible, forward-moving reporting.

DISCOVERY · PRIORITIZATION · VALIDATION · MOBILIZATION · SCOPING
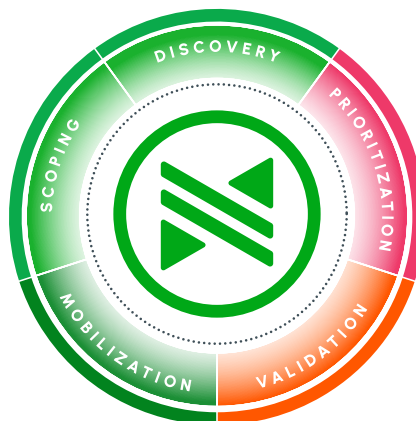

PRIORITIZE WHAT PUTS YOU AT RISK

Nagomi connects the dots between threat intel, vulnerabilities, control gaps, assets and business context to surface what's truly exposed.
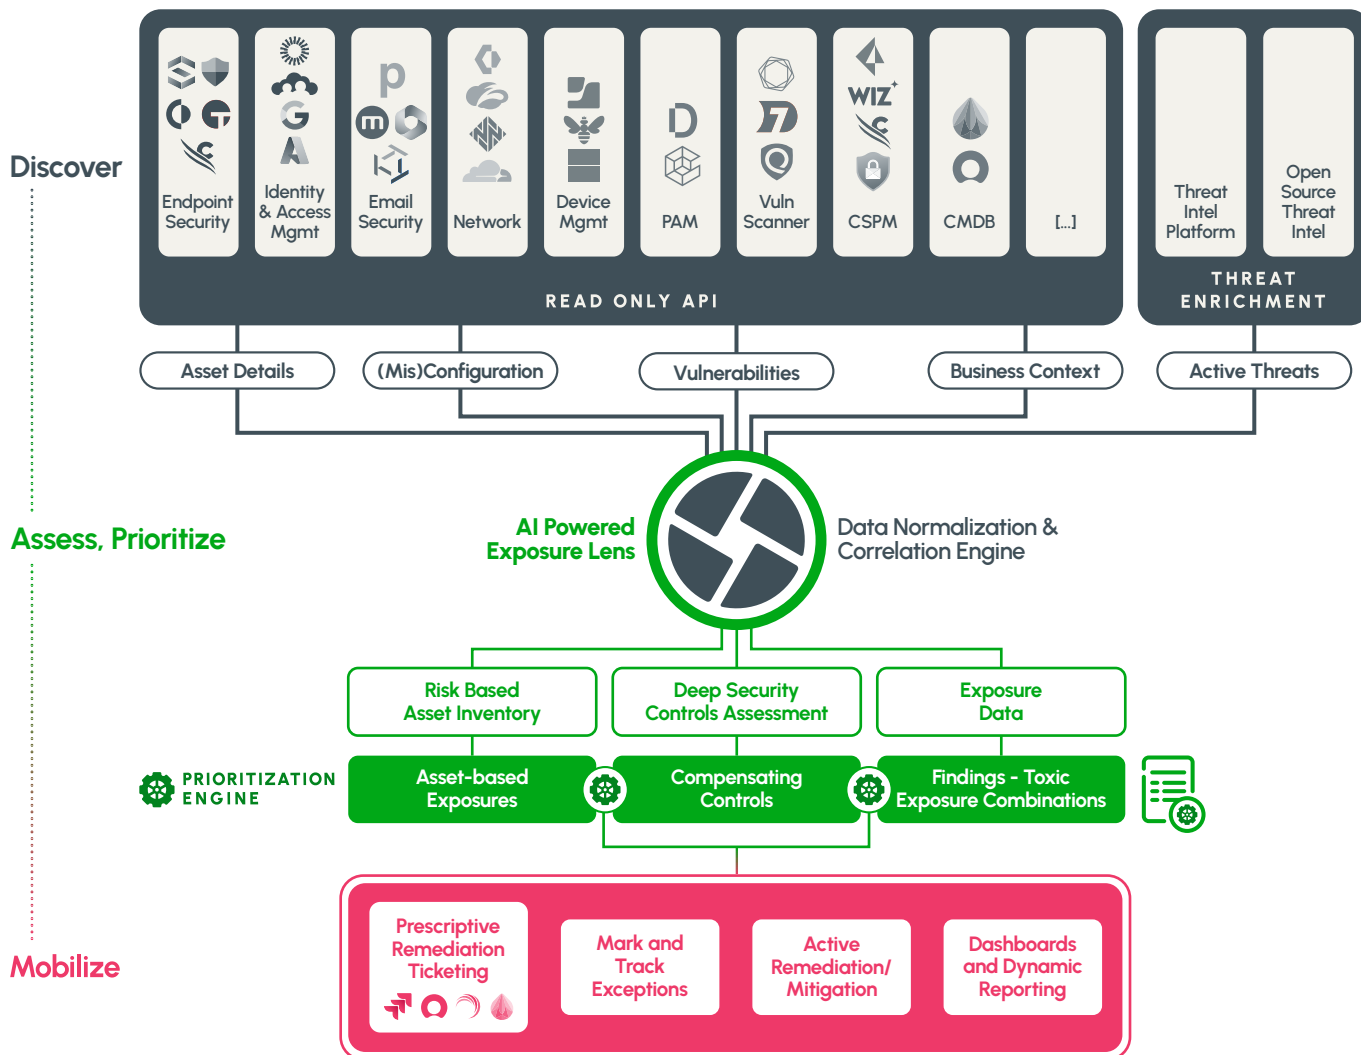

REMEDIATE WITH WHAT YOU HAVE

Mobilize response with your existing tools and teams. No rip-and-replace, just fast, coordinated action across the business.

Operationalize CTEM in One System of Record

Using agentless, read-only APIs, Nagomi continuously ingests and correlates exposure data without adding complexity. At the core is Exposure Lens the engine that makes exposure management operational by connecting five critical dimensions: assets, controls, vulnerabilities, threats, and business context.

PRIORITIZATION ENGINE

Asset-based Exposures	Compensating Controls	Findings - Toxic Exposure Combinations

Mobilize

Prescriptive Remediation Ticketing	Mark and Track Exceptions	Active Remediation/ Mitigation	Dashboards and Dynamic Reporting

Nagomi doesn't just identify issues, it explains them. It surfaces what's truly at risk, treating every exposure in its full context instead of as another patching ticket or one-off workaround.

It shows what's exposed, why it matters, who owns it, and how to fix it, backed by evidence and delivered through the workflows and tools your teams already use.

"What Nagomi solves for me is the question I get asked by leadership... How secure are we?"

Iain Paterson, CISO | Well Health

One Platform Built for CTEM Execution

Teams use Nagomi to cut manual work, expose real risk, and mobilize faster. These use cases highlight the outcomes they achieve when continuous threat exposure management stops being theory and starts driving measurable risk reduction.

AGGREGATE AND DISCOVER

Automate Asset Inventory and Coverage Gap Analysis
Save 460 hours a year previously wasted on manual spreadsheet work.

Maintain Proactive SecOps Assurance
Achieve 20% EDR coverage increase in just 3 months.

Maximize the ROI of Your Security Stack
See a 30% increase in tool ROI across your stack.

ASSESS AND PRIORITIZE

Prioritize ALL Exposures in Context
Eliminate 90% of critical exposures in 3 weeks.

Map Threats to Controls
Reclaim 4+ FTEs with automatic defense mapping.

Track Benchmarking Against Frameworks
Validate controls against MITRE ATT&CK, NIST, and CIS standards, cutting audit prep time by 40%.

MITIGATE AND MOBILIZE

Accelerate Remediation Across Teams
Cut remediation time by 45%.

Dynamically Report Performance
Save 30 hours a month on security performance reporting.

Unify and Oversee Risk Across Subsidiaries & M&A
Manage 7 acquired companies in a single place.

"Nagomi enables proactive management without waiting for alerts, ensuring we get full value from our security investments."

Tanner Randolph, CIO & CISO | Applied Materials

"Nagomi was a wake-up call. It shows us exactly where coverage is missing and gives me the confidence to explain risk to the board with real data."

Matthew Mudry, CISO | HomeServe
